

Amendments to the Specification:

Please replace the Abstract with the following amended Abstract:

--A device for positioning separately supplied elongate meat products, comprises two driven endless aligning conveyors running with the transport ~~5~~paths substantially parallel to each other, which transport paths together form a support for the meat products for transporting such that, at the position where the transport paths are mutually adjacent, they are in a lower position than when at a greater mutual distance. This structure also relates to a method for positioning separately supplied elongate meat products.-
